DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 5 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Nagura et al. (USPN 4,927,682).

Nagura et al. discloses layers in a sheet material made from polyimide (Column 2, line 65 to Column 3, line 5 and Column 8, lines 64 - 67) and polyethylene (Column 3, lines 42 – 45). The polyethylene layer has holes, voids, (The voids have a smaller surface area on the surface of the film and an increased surface area through the thickness of the film, forming the holes. Column 3, lines 35 – 41) on both the surface of the film and also in the interior of the film (Column 4, lines 35 – 43). Lamination is used to hold the two layers of film together (Column 6, lines 6 – 11). Since Nagura et al. discloses that there is a greater tendency of peeling or separating between the polyimide and polyethylene layers when there are more voids in the surface of the film (Column 40 – 44), it is inherent that the lamination occurs in the areas surrounding the voids in the surface of the polyethylene.
